8 Criteria for Choosing A Drinking Water Filter

Drinking Water System : What is the most important criteria?

Listed below are 8 criteria when choosing a drinking water system.

1. Safety & Hygiene

- Is the water filter system certified by non-profit, third party, reputable organization such as NSF?
- Is it certified to the highest standard of the organization, example Class 1 instead of Class 2 or 3 ?
- Is the water filter system able to remove harmful chemicals like asbestos and is it certified under the Standard 53 : Health Effect of NSF/ANSI standards?

2. Purpose

- Do you plan to use for drinking only?
- Or for washing of food materials as well?
- Is the design enable you to perform both tasks efficiently without giving you trouble?

3. Flow rate

- Is the water filter system gives you the flow rate that convenient to you ?
Note : High flow rate does not mean water filtration quality is not good. It depends on the water filtration technology.

4. Appearance to match kitchen design

- Do you plan to hang the water filter on the wall?
- Or you prefer Counter top design?
- Or you prefer your water filter system hiding under kitchen sink so that you can have more space for your food preparation and your kitchen looks tidy?

5. Space occupation (size)

- Do you have enough space in your kitchen if you to choose the counter top design?
- How much space does it occupied? Is the space allocated by you is enough for the counter top design?
- If you prefer to hang on the wall, is there any suitable space for you to do so without occupying much of your kitchen space?

Note: System that occupied larger space does not mean better filtration, it depends on the technology of the water filter system.

6. Cost to Maintenance

- Cartridge, electricity, water wastage?
- Is there any hidden cost for calling technician?

7. Secret Failure

- Is the system fool-proof against failure?
- What if forget to change cartridge, does the system gives 'alarm' to us?
- What will happen if the cartridge is saturated prior to due date (because of over consumption of the drinking water system)?

8. Maintenance Time

- Is the design solid, what is the changes for hose leaking?
- Must you call a technical for simple maintenance?

Choose your drinking water system wisely that meet your needs.

Why Health Claim Performance is Important?

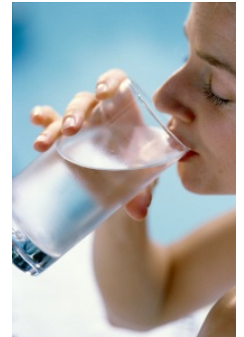

How do we know whether a drinking water system would be able to supply safe drinking water, either for drinking or for cleaning food?

Yes. Through 'health claim performance' certified by third party, non-profit organisation such as [National Sanitation Foundation \(NSF\)](#).

Example of health claim performance data sheet, [click here](#).
